## IDENTIFICATION DOCUMENTS

## PRODUCTION OF IDENTIFICATION DOCUMENTS

STATE PRINTING WORKS OF SECURITIES, state enterprise (SPWS) is a traditional manufacturer of personal identification documents, both standard types of documents in paper form and in the form of plastic cards of the ID-1 format. The documents are produced in accordance with national and international (in particular European) legislation and meet the requirements of ISO, ICAO 9303 and EU technical standards. The documents may contain, in addition to alphanumeric data, a machine readable zone or an electronic contact or contactless chip, or other types of data carriers, such as bar codes or magnetic strips. SPWS provides as part of the production of identification documents a complex process from the processing of graphic design, preparation for printing, printing proper and personalisation to the delivery of the product to the place of destination. SPWS offers a wide range of services in the field of the production of identification documents to satisfy the individual requirements of its customers from both the commercial and non-commercial spheres. In the field of personal documents, SPWS also offers the implementation of related IT systems for the electronic collection of data, production of applications and their central processing, personalisation and subsequent issuance of the documents.

## SECURITY FEATURES

The level and method of protection is a key element of the identification documents. The security features used are public and concealed and can be placed in the design, material or print. Commonly used are 3 levels of protection – visible to the naked eye, detected by special technical means, and detectable by laboratory methods and means.

## PERSONALISATION

SPWS offers high quality laser personalisation of plastic cards and electronic personalisation of contact and contactless chips in conformity with ICAO and ISO standards. Laser engraving ranks among the very effective anti-forgery security features and, combined with the electronic part of the document, ensures a high level of document security. Other methods of personalisation include, for example, personalisation on digital machines and retransfer printing. The actual design of the document and the method of personalisation are implemented in accordance with the specific ideas and requirements of the customer.

## HIGH SECURITY AND LEVEL OF PROCESSING

For these types of products, their aesthetic acceptability, cost-effective production, durability and adequate protection against falsification are always taken into account. The design of documents processed in SPWS complies with the latest standards in the area of design, materials used and printing so that the possibility of their counterfeiting is made difficult as much as possible. The overall processing combined with the security features is at a high professional level, due to which the group of electronic travel documents processed in SPWS clearly is at the cutting edge worldwide.
