STC - ID ISSUER for Czech Republic

QA environment specification

Document history

Date	Version	Comment
4.4.2019	1.0	Initial release
10.4.2019	1.1	Endpoints update
14.2.2020	1.4	Update according to Router and Secondary v1.4
21.11.2023	2.0	Update according to Router and Secondary v2.0

Introduction

STC provides QA environment for integration purposes. Updated version.

Components of QA environment:

- Portal application – GUI for self-registration of EO and related EO management for registered users
- Public API – interface providing all operations for application integration (both registration and orders management)

Endpoints

Portal	https://test-portal.znacenitabaku.cz/stagingtpd
Public API v2.0	https://test-portal.znacenitabaku.cz/DevPublicApi/tpd/v2.0/swagger/index.html
IdpDomainName (Auth server)	https://test-portal.znacenitabaku.cz/stagingidp

Credential request

There is a simple procedure leading to obtain credentials.

1. EO must perform a self-registration process. This must be performed via portal GUI and it consist of several steps:
   a. EO representative fills up a registration form in the public part of GUI and confirms it.
   b. EO representative receives e-mail with confirmation link – by this validation is the email address confirmed and set as user login into portal
   c. ID Issuer validates the registration application and most likely confirms it.
   d. EO is notified by email that registration is finished
2. Once EO is registered and active (means that registration is finished), the request for API credentials can be performed. Within QA environment EO has to simply send mail to info@znacenitabaku.cz with brief request (key point is to state the EO_ID issued). The credentials delivery is than done via email addressed to EO contact e-mail (the email address which has been provided during registration).

Availability

The updated QA environment is available starting November 21st 2023.
