

STC

Identification documents

PRODUCTION OF IDENTIFICATION DOCUMENTS

Státní tiskárna cenin, s. p. (STC) is a traditional manufacturer of personal identification documents, both standard types of documents in paper form and in the form of plastic cards of the ID-1 format. The documents are produced in accordance with national and international (in particular European) legislation and meet the requirements of ISO, ICAO 9303 and EU technical standards. The documents may contain, in addition to alphanumeric data, a machine readable zone or an electronic contact or contactless chip, or other types of data carriers such as bar codes or magnetic strips. As part of the production of identification documents STC provides a complex process from the development of graphic design, preparation for printing, printing itself, personalisation to delivery of the product to its place of destination. STC offers a wide range of identification document production services to satisfy the individual requirements of its customers from both the commercial and non-commercial spheres. In the field of personal documents, STC also offers the implementation of related IT systems for the electronic collection of data, production of applications and their central processing, personalisation and subsequent issuance of documents.

SECURITY FEATURES

The level and method of protection is a key element of identification documents. The applied security features are both public and concealed and can be placed in the design, material or print. Three levels of protection are commonly used – visible to the naked eye,

detected by special technical means and detectable by laboratory methods and means.

PERSONALISATION

STC offers high quality laser personalisation of plastic cards and electronic personalisation of contact and contactless chips in conformity with ICAO and ISO standards. Laser engraving ranks among highly effective anti-forgery security features and, combined with the electronic part of the document, ensures a high level of document security. Other methods of personalisation include, for example, personalisation on digital machines and retransfer printing. The actual document design and method of personalisation are implemented in accordance with the specific ideas and requirements of the customer.

HIGH SECURITY AND LEVEL OF PROCESSING

The aesthetic acceptability, cost-effective production, durability and adequate protection against falsification are always taken into account for these types of products. The design of documents processed in STC complies with the latest standards in the area of design, utilised materials and printing so that the possibility of their counterfeiting is made as difficult as possible. The overall processing combined with the security features is at a high professional level, due to which the group of electronic travel documents processed in STC is clearly at the cutting edge worldwide.
